

FCCLA Planning Process Summary Page

IDENTIFY CONCERNS

Our main concern within our community is that we need to expand our school garden. Our concerns within the project is that it is being filmed during winter, so there are no vegetables able to be used from the outdoor garden. Another concern we have is that tower gardens or outdoor gardens are an expense some school may not be able to afford. Additionally, we have been given a preliminary "go ahead" for constructing a second raised bed garden, but we do not know how this is going to be paid for.

SET A GOAL

Our main goals are to create an instructional video that informs the community and school administrations of the educational value of school gardens. Everyone who watches this video will gain knowledge and an understanding of how gardens positively affect a community. We will address the benefits and values of school gardens for students and the greater community.

FORM A PLAN (WHO, WHAT, WHEN, WHERE, HOW, COST, RESOURCES, AND EVALUATION)

Grant and Aradhya will create a video using foods that are found in our garden to prepare a healthy meal while also stressing the importance of school/community gardens. We will meet up twice a week to write the video, film it, and edit it. On weekends we will meet on zoom in order to complete the rest of our tasks. Aradhya is very talented with writing and filming, while Grant is great at video editing. This skill set and abilities work very well together. Regarding the subject of licensing, we would not need any licensing for the song we are using, as we have permission from the owner. Our FCCLA advisor will cover the cost incurred. Our resources are the FCS classroom, the internet, microphones, video cameras, ring lights, editing software, the raised bed garden garden, and the tower garden. The only barriers that we could face are scheduling issues of when we could talk in person. If that was to happen, we will meet on zoom.

ACT

To have a successful video project, we were able stick to our schedule and not fall behind. We will film each scene as it falls within the script. It was filmed in Ms. Schaller's FCS classroom, as well as in the outside garden. We will prepare vegetables and other ingredients that aren't from a garden in the classroom, while having a voiceover of the importance of gardens. We will also talk about the alternatives of outdoor gardening, while also giving a call to action for our viewers. All the while this is happening, our advisor will be supervising and giving guidance towards our project. After all the filming is done, Grant will edit it, while Aradhya still gives her direction and ideas of how it should be done. We will also meet with Ms. Schaller to go over the rubric and video for a final time.

FOLLOW UP

All pieces of our project were successfully uploaded to our school website before February 1st. Our advisor and both members posted the video to all of our social media accounts. We will also send our school administration our video project, as they are our targeted audience. We could really improve in the future for projects by starting them as early as possible. Once we are fully finished with our video, we plan to thank everyone involved.
